

Daylight Viewable LED Displays

Hanover now has a range of LED destination displays to provide an even greater choice for the operator. Similar to the flip-dot, the LED sign has no moving parts and has been made highly reliable and comes with Hanovers **10 YEAR GUARANTEE**. The equipment can be easily programmed using the same Windows based HELEN software as the flip-dot signs.

Benefits include:

- Our standard LED signs are louvred for maximum visibility in all lighting conditions.
- Built in ambient light sensor ensures maximum legibility day and night.
- Our signs are fully electronic with no moving mechanical parts.
- Wide viewing angle.
- DPTAC and DDA compliant.
- User friendly programming through our Windows based Helen software.
- Our signs can display in different languages.
- No eprom changes are necessary when updating or changing software.

Curved Daylight viewable LED signs

This development has led to improved vehicle aesthetics both inside and outside the vehicle and increased legibility by ensuring the sign is in close proximity with the windscreen at all positions along its curvature. The incorporation of a tinted, non reflective window further increases contrast.

Rapidly evolving vehicle design and manufacturing techniques have required Hanover to respond by developing a truly curved led sign. Various radii and sizes of signs are available, fitting most standard curved windscreens.
